

Powder Coat Finishes

We take pride in the quality and variety of our finishes. We offer two standard plated finishes and 16 stock powder coat finishes. All products are hand-ground and polished prior to finishing. The product is then finished to our customer's specifications and our rigid standards of quality. This ensures the best looking and longest lasting finish available in the industry.

Our flaw-free, seamless coating is extremely durable, providing superb impact and corrosion resistance. Custom powder coat finish colors are available, providing the customer with a rainbow of colors and a variety of textures. There may be an up-charge and lead time extension for custom orders. Note: Actual colors may vary slightly.

Dyecoat™ Finishes

The durability of steel and powder coating –with the appearance of wood, carbon fiber, or other materials! Dyecoat opens the door to possibilities beyond solid colors for steel and aluminum table bases. In this unique process, the dye penetrates into the powder coat surface, actually changing the powder coat color. The durability remains the same but the appearance transforms into beautiful finishes that rival the real thing.

Throughout our price book, prices for Dyecoat are included within each series that is compatible with Dyecoat. This includes many of our newer and most popular series. Below are samples of a few of our more popular finishes, although many additional finishes are possible with this versatile finishing process!
