

Dyecoat Finishes

Dyecoat is an exciting and unique option of embedding an image into a powder coat finish. The application can be applied to flat, curved or intermittent surfaces that have the capability of withstanding 374°-392° F to retain their shape. This allows us to make options available that could not be duplicated in its natural substance. This process will also work with our wire management doors, tapered columns and on aluminum extrusions and castings. This European technology provides a beautiful, environmentally friendly finish that is powder coat tough; all on products that are recyclable and can be manipulated to create your own design cheaper and easier than using the natural materials. **NOTE: Actual colors may vary slightly.**

American Oak Texture / Smooth
15001/15002

American Cherry Texture/Smooth
15003/15004

European Oak Texture/Smooth
15005/15006
