Infinite Options For Your Interiors

Valley Design's Dyecoat™ is a unique, environmentally friendly application of embedding an image into a powder coat finish. The process of transferring design onto steel or aluminum powder coated parts is astonishing. From wood, marble, granite or any specific pattern or image; the capabilities are only limited by your imagination.

This innovative technique applies accurate, multi-color designs and patterns to powder coated flat, curved or intermittent surfaces. The application can be applied to powder coat parts that have the capability of withstanding 374°-392° F to retain their shape.

The Dyecoat™ finish offers opportunities and solutions to today's market trends and demands. The functional durability and decorating options aren't only pleasing to architects, designers and decorators but also to automotive, construction and manufacturing industries.

Special parts can be sent to Valley Design to be evaluated to see if they are suitable for the application.

Some applications include:

Waste receptacles, park benches, indoor and outdoor furniture, tableware, window and door trim, ladders, aluminum extrusions and window latches. To discuss your application solutions, call a customer service representative at Valley Design.
